Lump-free, finest body milk / lotion

THE APPLICATION SCOPE / PURPOSE

In the production of body milk or lotion, thickening powder is added to an aqueous phase, which is emulsified at a later stage. The introduction of powders requires an efficient feeding and dispersing process. Kinematica offers solutions for such applications in a continuous process. The powder can be directly absorbed and due to the efficient dispersion the lotion or milk is free of lumps which would strongly influence the skin feel.
