MEGATRON® MT-SHS: Cream Production Perfected!

THE APPLICATION SCOPE / PURPOSE

Cosmetic creams are product based on an O/W emulsion in which the active ingredients or fragrances are embedded in oil or water. The release takes place during the application on the skin and provides the skin with moisture, fragrance and/or protection. The droplet size and the narrowest distribution are normally desired since this is crucial in the stability of the emulsion. The finest emulsions can be produced using Kinematica equipment.
